RE: Cell Tower in Campbell Valley Park, South Langley, B.C.

Dear Mayor Green:

My name is Dr Reese Halter, I am a practicing conservation biologist specializing in tree physiology with over two decades of experience in both the Northern and Southern Hemispheres. Currently, I am stationed at Cal Lutheran University in Thousand Oaks, Calif. I'm also the founder of Global Forest Science an international conservation institute with operations in 8 countries. I oversee approximately 165 scientists. I am also a prolific writer and one of my books, *The Incomparable Honeybee and the Economics of Pollination*, Rocky Mountain Books, documents the known deleterious hazards of high frequency electro-magnetic radiation from cellular towers on honeybees. This year alone North America is missing at least 55 billion honeybees from a mysterious disease called Colony Collapse Disorder.

I urge the City Council to re-consider the recent license for a cellular tower in Campbell Valley Park. The radiation will not only adversely impact honeybees and native bees but all wildlife including other beneficial insects like ladybugs and dragonflies as well as frogs, newts, all birds including raptors like eagles, hawks and owls and other critters like raccoons and deer.

I am including a pdf from a recent article in the San Diego Union Tribune.

Should you have any questions I am more than happy to discuss this further.

Reese Halter (Dr)
